DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach or to fairly suggest a speaker system comprising a sound box having an interior divided by a plurality of dividers, into a plurality of air chambers; each air chamber being formed with an air passing hole and an air dissipating hole; the air passing hole connecting to at least a neighboring air chamber; and the air dissipating hole connecting to the atmosphere; and wherein an air cushion is formed in at least one of the air chambers and is *rapidly* depressurized through the air passing holes and air dissipating holes such that the formed air cushion does not interfere with subsequently generated air cushions.

Discussion of Balogh (US 4,054,748):

Balogh teaches a speaker system comprising a plurality of air chambers and having apertures provided in each air chamber for connection to an adjacent air chamber and to the ambient atmosphere. However, the apertures of Balogh include acoustic resistance for opposing the flow of air from one chamber to the next, delaying the passage of air from one chamber to the other and thereby failing to rapidly pass air so as to not interfere with subsequently formed air cushions.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
